Skills
- Software Engineer
- Design and Architecture

Attributes
- Critical Thinking
- Lifelong Learner
- Fast Learner
- Practical

Have Worked With

Java, JavaScript, Ruby, Python, Node.js, React, React Native, AngularJS, Android, Spring, Relational Databases, Time Series DB, NoSQL, Query Engines, REST, Microservices, Streaming Systems, Linux, Git, GitHub/GitLab, Jenkins, Docker, CI/CD pipelines, Monitoring Tools, AWS, HTML, and CSS.

Recent Experience

VMware, Remote – *Senior Member Of Technical Staff* – 2021 - Preset

Member of the data SD-WAN management plane team as a Full Stack Engineer.

- The work encompasses the development and management of features around network statistics upload, storage, APIs, and visualization.
- Migrated time-series data from MySQL to ClickHouse.

Infor, Remote – *Senior Software Engineer* – 2020 - 2021

Member of the data lake Services team. The team provides APIs that allow clients to query the data lake.

- Lead developer of a service that transformed SQL dialects to query engine domain dialects.
- Worked on a custom JDBC driver for interacting with the data lake.
- Helped build a tool for cleaning up data in the data lake.

Cox Automotive, Atlanta – *Senior Software Engineer* – 2018 - 2020

Member of the Inventory Foundation team. The team handled the APIs for managing vehicle inventory data.

- Created and supported Restful services in a microservices architecture.
- Worked on web and mobile applications.
- Created tasks and workflows that helped team productivity.
- Built a database migration tool using AWS Fargate.
- DevOps in AWS cloud.

LivePerson, Atlanta – *Senior Software Engineer* – 2018 - 2018

Member of the R&D team that worked on rebuilding part of a chat messaging system.

- Worked on building processors for a streaming application using Kafka.
- Built UI for an internal NodeJS framework using React.

Cox Automotive, Atlanta – *Senior Software Engineer* – 2015 - 2018

Worked as part of team that built and managed an enterprise SMS and Email messaging engine and APIs.

- Worked on building and maintaining a micro application.

- Worked on building and maintaining APIs.
- Helped build and maintain a frontend application.
- Worked on a backend team that built and managed APIs that interacted with a AS400.
- Created tasks and workflows that helped team productivity.
- DevOps in AWS cloud

Accenture, Atlanta – *Junior Software Engineer* – 2014 - 2015

Trained in Java and test-driven development. Worked on functional and system testing for a large financial company.

Gearbox Solutions, Atlanta – *Software Developer* – 2013 - 2014

Built and integrated solutions using the FileMaker platform.

Education

Georgia Institute of Technology, Atlanta – *MS In Computer Science* – 2018 - 2020

- Specialized in Interactive Intelligence.

Kennesaw State University, Atlanta – *BS In Biology* – 2005 - 2008

- Completed directed study in microbiology.
